TMC SPECIFICATION NO. S-125

TITLE: REVISION OF DRAWINGS

JOB

APPROVED P. J. B.

A revision refers to any change on the drawing after the drawing has been approved by the engineering department and issued by the drafting department. Revision shall be made by erasure, or by the addition of new or revised information. Before the change is made on the original drawing, a copy shall be made and filed for future reference.

Item numbers shall be used to indicate the location of the revision in the body of the drawing and to identify the corresponding revision data in the revision block. All revisions to a drawing incorporated at one time shall be identified by the same letter.

Letters used in revisions shall follow in alphabetical sequence. The use of letters "I", "O", "Q", and "X" should be avoided. When revisions are numerous enough to exhaust the alphabet, the revisions following the letter "Z" shall be lettered "AA", the next "AB", etc. Use only upper case letters.

Each revision shall be recorded in a revision block on the original drawing as follows:

ISSUE	ITEM	CHANGED FROM	DATE	CN. NO.	DRAFT	CHECK	ENG. APP.
A	1	1/4 D.		1			
	2	1/2 D.		1			

Each revision shall be signed by engineer requesting change and by the Chief Engineer. When a revision is made, the drawing numbers shall be followed by the revision letter; i.e., PM-101-A. Only prints with the latest revision letter following the drawing number are to be considered authentic.

The drafting department shall make all revisions on original drawings as per change request. When prints are issued by the drafting department, the number of prints so issued shall be recorded.
