

SALES SERVICE BULLETIN NUMBER 217

Transit/Operating Case, Model TOC

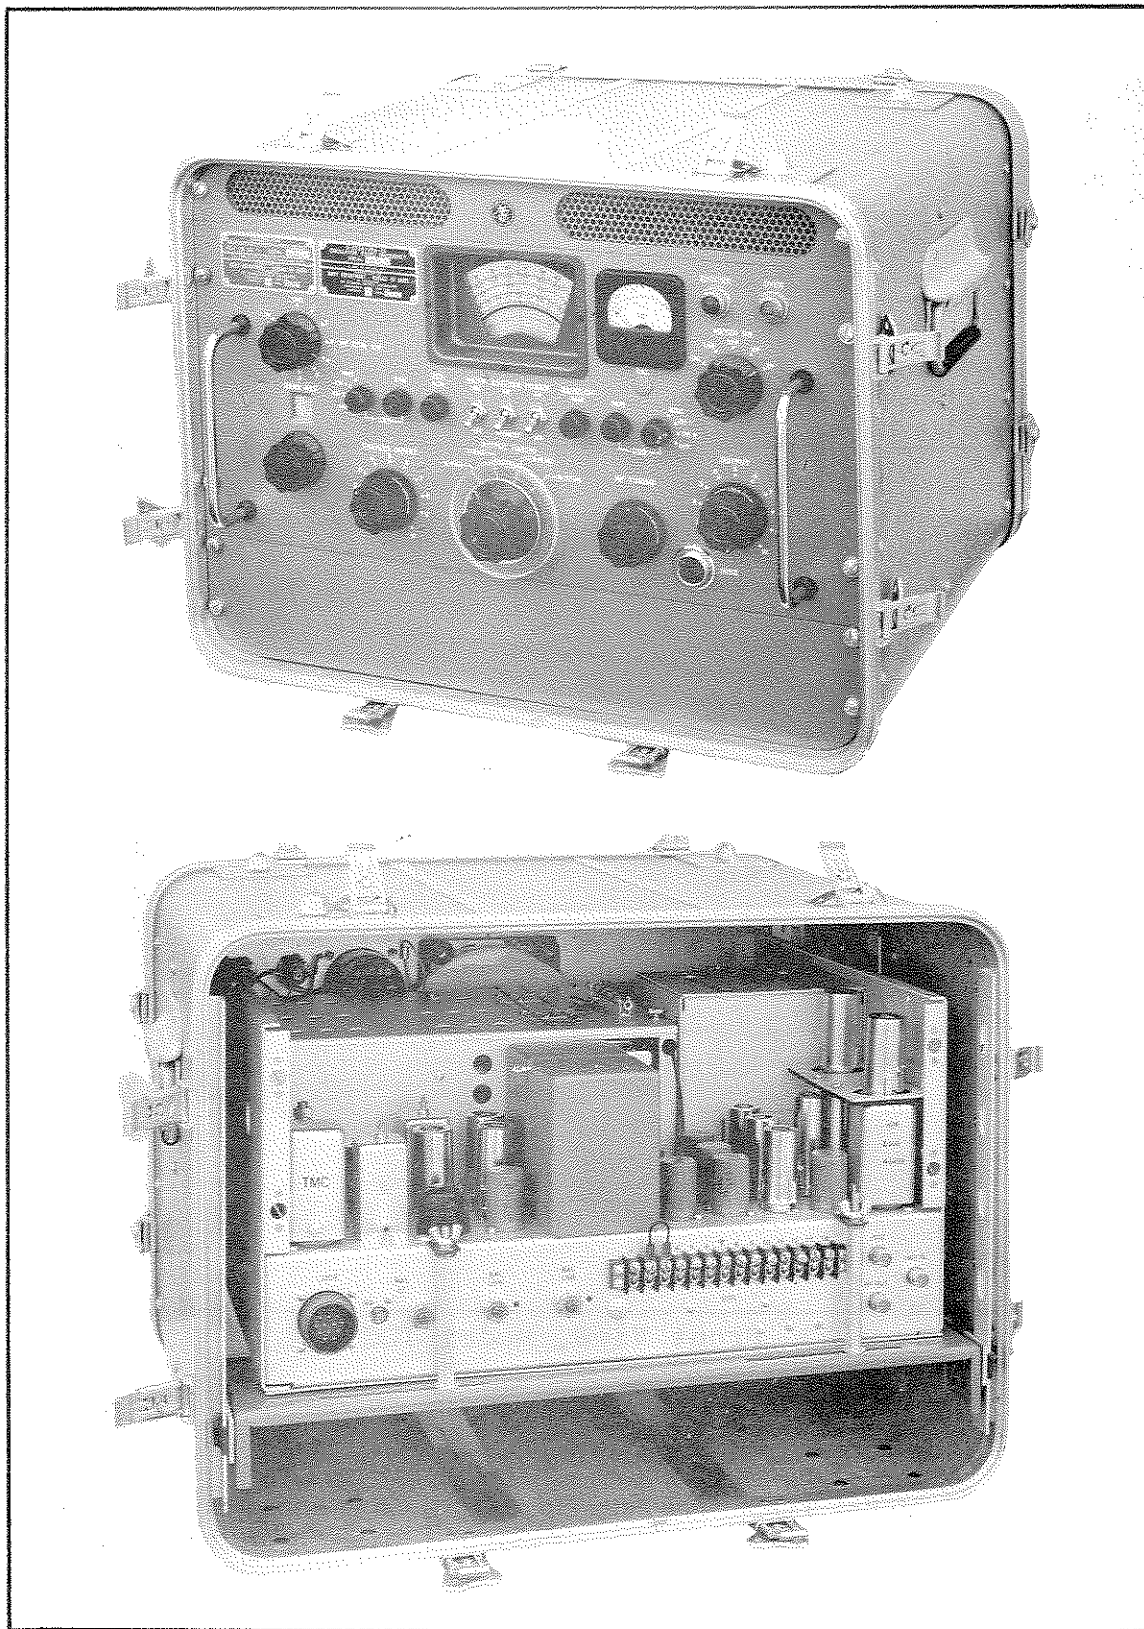

Front View, Model TOC

The TMC Model TOC, Transit/Operating Case, is a sturdy fiberglass reinforced carrying case designed for field or base station use.

The Cases, manufactured in accordance with JAN/MIL specifications where-ever practicable, are "stackable" and will accept standard rack and panel units of any panel height up to 14 inches, and with an 18 inch maximum depth.

The use of these cases makes possible the transportation and operation of complete communication systems with a minimum of material handling equipment and personnel.

The rear view shows the adjustable equipment clamps which provide internal bracing for the equipment during transportation and operation.
